

...to help little ones in Africa receive proper care, so that they too can start their lives with a promising future... full of health, happiness, learning and love.

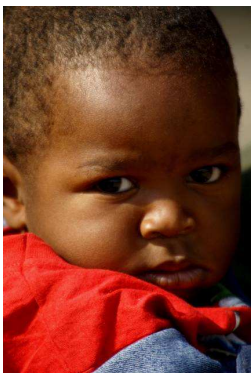

A Gift of Care has been given in your honor...

Every mother cherishes tucking her baby in at night knowing that he or she is safe and healthy.

Many mothers around the world raise their little ones in communities where access to medical care is days away and further out of reach financially.

In Africa, two thirds of newborn fatalities could be avoided if only knowledge and accessible care could reach these communities.

With early detection and cost-effective care for breathing, feeding and fighting infection, these infants would have a significantly better chance to live healthy lives... and become the creative solutions to their community's challenges.

This gift gives these moms and babies the hope they deserve.

Infancy International advances sustainable, family-centered solutions for infant health and development in under-resourced communities in Africa.

We create partnerships with infant health specialists to respond to some of the greatest challenges facing infants and those who parent them.

Your Gift of Care

The Gift of Medical Care

This gift helps one hospitalized baby receive specialized newborn clinical care from a multi-national Infant Health Team.

This special baby will receive two weeks of clinical assessment, case management, intervention and treatment planning that will be sustained by the national doctors, nurses and physiotherapists.

Thank you for the hope you provide to special infants and parents in Africa to live their lives in health, happiness and love.
